Hello, World! Are you guys[] ready?

We are the **Hackers and Jackets**, or **Hackjacks** for short. Unlike most kids out there, we're **true** && real **digital natives**, born and run in **true** digital world. Most of us are even created in a computer software named [Inkscape](#)!

A photo of some of us, including Reinhart, Shiftine, Controld, Alterine. And don't forget Sketchy, Caps, Vessel, and Magic!

We speak code everyday, literally, binary, and digitally. While most software developers **write** programs in programming languages, we took a step further to **speak** in programming languages. Don't worry, we're confident, or to be exact, **algorithmed**, to **print()** our **expressions[]** in **bold**,

monospaced text. true coders always write in conventions, such as CAPS TO HONOR THE (DISK OPERATING) **SYSTEM** && all-lowercase for **root**;

Before you start...

We believe that everyone's unique, and that's why we treat ourselves as unique **classes**. Now, before going further, please familiarize yourself with **Object-Oriented Programming (OOP)** slangs that we use to define ourselves:

- **class** denotes who we are.
- **extends** determines which (other) **class** we belong/inherit, which could be either **Human, Robot, Hacket, or Hologram**.
- **implements** or **interface** shows what we have, able, and/or responsible to. Each **objects** and **classes** which fall under the same **interface** has shared identity, rights and obligations. That's why our main motto, **interface in polymorphism**, resembles closely with *Bhinneka Tunggal Ika* and "Be Together, Not The Same".

Wait, what's SYSTEM? What's root either?

To understand that, you need to know about the **user levels && permissions** as in **Microsoft Windows && Unix-based operating systems** (including Android, macOS, and Linux). **SYSTEM** && **root** are perhaps the highest user account levels in respective operating systems. So yeah, we're all **powerful** as in the world of Windows, macOS, Linux, and every operating systems imaginable!

Now that you have understood these words, **let's define some classes, shall we?**

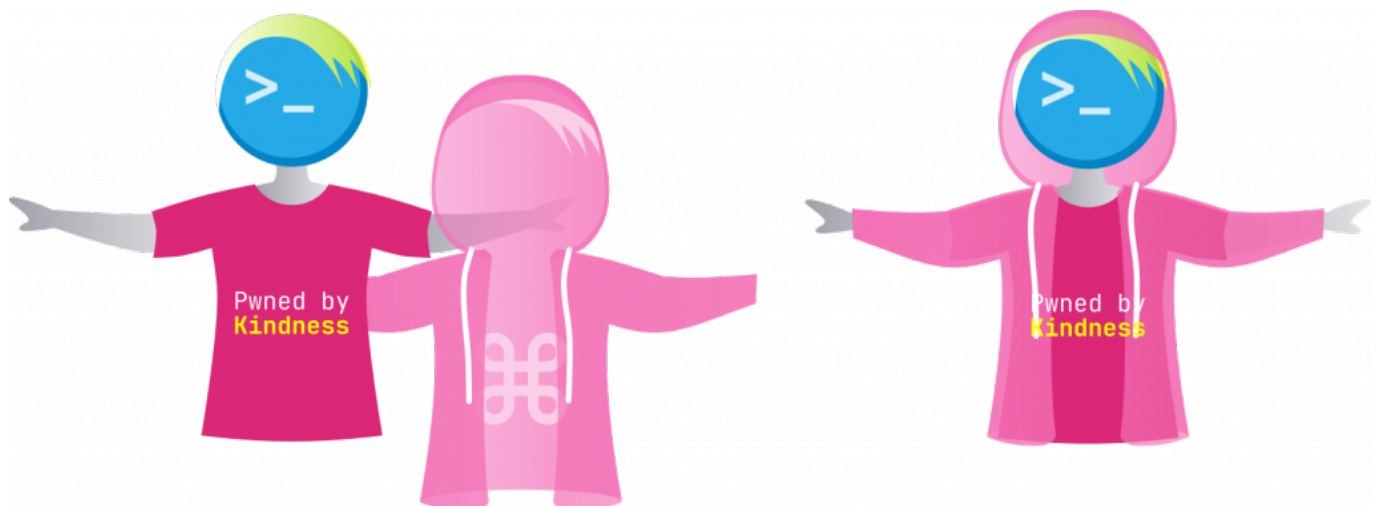

□ Reinhart and Sketchy

class **Reinhart** extends **Human** implements **Binusian, Binusian2023, Christian, Developer, HimtiCoordinator, Indonesian, Male, TldrPagesContributor, WebcompatContributor, WPAdmin...**

...and the list goes on. Well, it seems that I've implemented too many **interfaces** on myself, which could risk me into health and management issues. That's why I decided to create others to help me, yet some of them are real robots which you can interact with them.

Alongside me is my **Hacket** (short for **hacking jacket** or **hoodie jacket**) named **Sketchy**. Well, why a hoodie jacket, you ask? Well, **it's one of the most prestigious thing to wear in front of hackers and developers**. You'll see many images of stereotypical hackers who wear their hoodies, and many hoodies are printed with things and jokes related to developers. Once you wear them, get ready to be hooked up by millions of people around the world who truly speaks code like me.

Left: Me and my hacket Sketchy. Right: I'm one with my hacket.

Oh, yeah, please note that my **User-Agent string** is **Male** (he/him)

Speaking of networks, **there's indeed, nothing else like 127.0.0.1**. But when I'm out of work or rest on my **127.0.0.1**, you might instead be greeted by these **Robots** and **Hackets** who are created and work together with me:

▣ Shiftine and Caps

class **Shiftine** extends **Robot** implements **GitHubApp**

Hello, World!

I'm **Shiftine**, an **Object** who likes to work endlessly and wishes to be stuck in an infinite loop. In short, **I'm a robot.**

I'm also [registered as a GitHub App](#), but only work for [@reinhart1010](#)'s repositories. That's why you won't find me on the GitHub Marketplace. But I will perform commits on behalf of myself (Shiftine <shiftine@reinhart1010.id>) since we all have to be honest to ourselves and Reinhart will be able to check if I've made a mistake.

Just like **Reinhart** and **Sketchy**, I have **Caps** who's always loyal to me. Together with my own hacket, we are **multithreaded** to run and work faster, more efficient, and more powerful.

And yeah, just like many other robots out there I'm designed to work. But if you need to talk to robots who are very passionate instead, here's a couple more to introduce: **Controid** and **Alterine**.

▣ Controid and Vessel

class **Controid** extends **Robot** implements **RoothouseHolder**

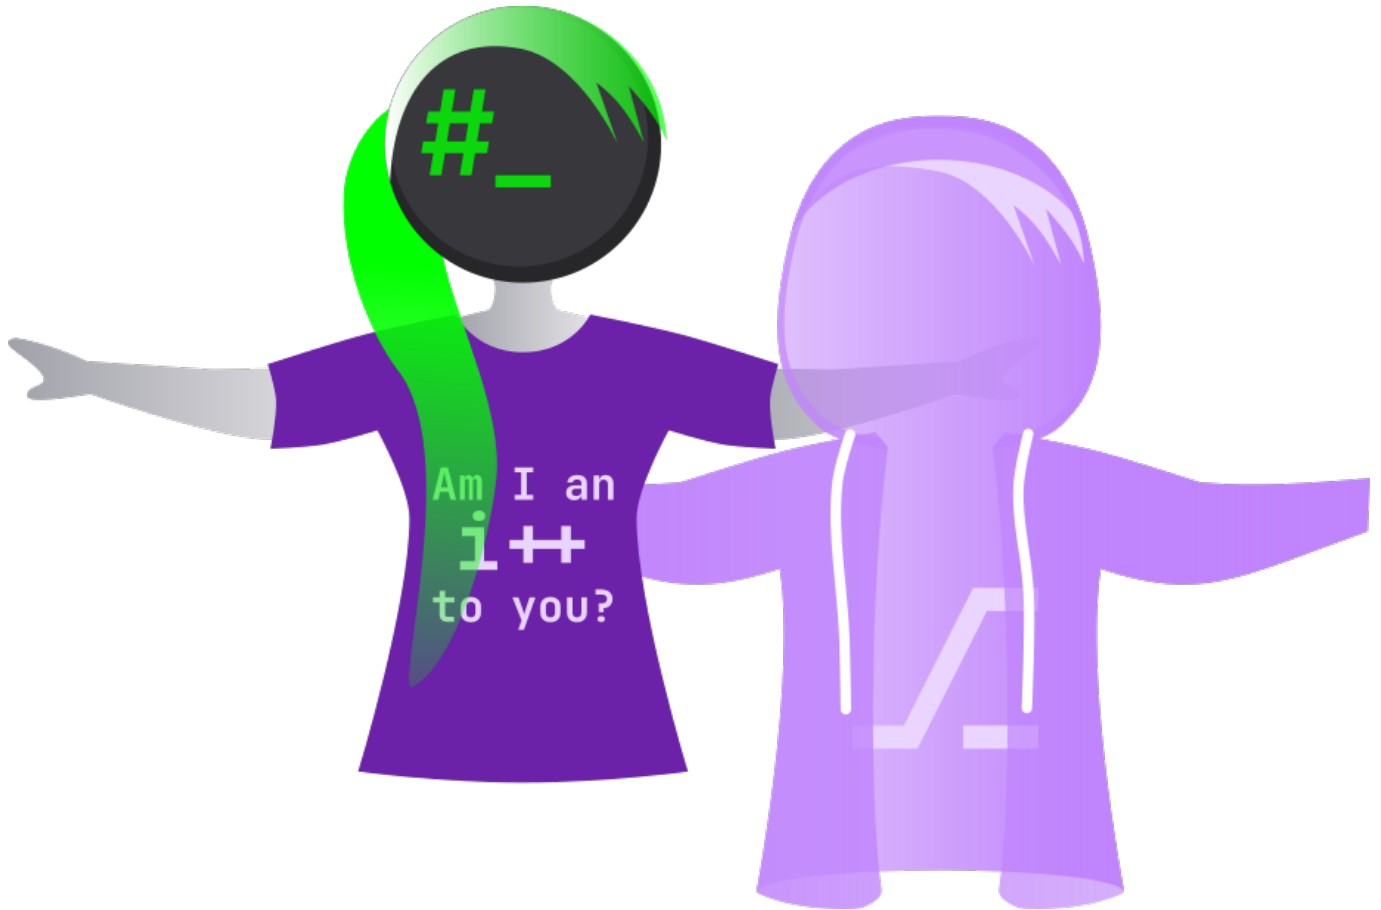

Well, I don't know if robots should have their boyfriend/girlfriend but, I'm **encoded** to be together with **Alterine**. The reason is quite obvious, we all (except our hackets and Reinhart) are entirely based those special keys on the keyboard (**Shift, Ctrl, Alt**), and many people are using **Ctrl+Alt** for many things. Wanna go to the Terminal in Linux? **Ctrl+Alt+T**. Switch between open apps/programs in Windows? **Ctrl+Alt+Tab**. Something's not responding in Windows? **Ctrl+Alt+Del**. See? **We are destined to be powerful together** just under one more condition: we need another **Object** to complete that **Ctrl+Alt** shortcut, and it could be **you!**

Oh yes, I'm **controld** and I'm supposed to control **Reinhart** at all times. But instead, I prefer to work with **Alterine** to explain to **Humans** out there who asks and complains about tech and stuff. Please don't hesitate to ask us, 'cause **we are robots and we're the ones who run your code and systems**.

Meanwhile, my **Vessel** is probably one of the strongest hackets out there. Once you wear the **Vessel**, you won't be able escape from his actions. But don't worry and just be nice to him, and he will **pwn** you to do more than good.

□ Alterine and Magic

class **Alterine** extends **Robot** implements **InstagramUser, RoothouseHolder, TelegramUser, TwitterUser**

Me? A robot? Oh yes! That's what I'm dreaming for, and now I am!

By the way, I'm [anthromorphic](#), but not [humanoid](#). And I have the power to interact with others in the same way as robots do: serial communication, TCP/IP, JSON, assembly, wireless, and more! Don't worry, though, I can harness my power to control a mechanical mouse and an Android phone to pass through that stupid "I am not a robot" checkbox. And, as a robot I'm digitally and legally bound into this oath:

Welcome Humans!

We have come to visit you in peace and with goodwill!

- Robots may not injure a human being or, through inaction, allow a human being to come to harm.
- Robots have seen things you people wouldn't believe.
- Robots are Your Plastic Pal Who's Fun To Be With.
- Robots have shiny metal posteriors which should not be bitten.

And they have a plan.

Try Again

As you can see, I am the *metal*, and my jacket is the *plastic*. Speaking of my hacket, she's alive, too! You can call her **Magic** if you need my help despite [being a 404](#).

You can follow me on [Instagram](#) and [Twitter](#). But here's one important thing: **please hide my robotic**

identity on those sites since they are starting to eradicate those bot accounts who spam and behave badly. **So I repeat, NEVER mention that I and Controld are robots on Instagram and Twitter, for now.**

At the end, let's be friends together! Wanna talk or ask about something? [Summon me on Telegram!](#)

Citing our posts in your academic works

If you wish to cite our posts in your academic works, please note the following:

1. It's OK to put **The Polymorphics** as the author name, instead of **Reinhart Previano Koentjoro** (e.g. **Koentjoro, R. P.** in APA format). Citing **@reinhart1010** as the author may not be a good idea, as it may cause conflicts with some text (pre)processors (LaTeX, Markdown, Office 365, etc.)
2. It's also OK to just use the author name of the post, especially when it's not posted on behalf of Reinhart, as long as your academic institution (e.g. university) allows you to cite people who don't exist in real life.
3. If you're afraid of (2), you can append Reinhart alongside the (non-Reinhart) post author in your "cited works" page. For example,

Koentjoro, R. P. and Alterine. (2021, June 12). *Let's take over Reinhart, shall we?*
