“This is as confusing as the reliability of statistics. When you see the Firefox website, IE website, even Safari website, it will show that they are the best (e.g. Safari is the fastest in the data on its site). Instead, Google Chrome says it is fast, without any data. If Google Chrome says fast only, what about other Chromium-based browser such as Citrio and SRWare Iron?”

Before I replied this to a article in [a GeekSided.com article](#) I looked up three websites.

- [Apple Safari’s page–Faster than Chrome and Firefox](#)
- [Mozilla Firefox’s page–Faster than ever](#)
- [Microsoft’s IE page–Faster than Chrome, Firefox & Opera](#)

They said that they are the best. Now, see the following websites

- [Google Chrome’s page](#)
- [Opera’s page](#)

Google Chrome and Opera are both chromium based-browsers, and both says a fast and free browser without any statistics.
