In order to reduce our Internet usage, we are no longer fetching the last 25 articles from BINUS University websites. Instead, we are starting to fetch articles based on the frequency the authors have posted over the last 14 days. Or specifically, $5 * \max(\lfloor n \rfloor, 1)$.

If you're not good at mathematics, here's what this means:

Articles fetched over the last 30 days	Newest articles which will be fetched
0-1	5
2-15	10
16-80	15

With this change in mind, we could save the Internet traffic to constantly fetching about 1.600 articles four times a day!
