So, we decided to update our [color palette](#), with four most notable changes:

1. We decided to deprecate the **Galih-Ratna** and **Dilan-Milea** naming on our palette.
2. We now encourage designers to use the different palettes for light- (formerly GR) and dark- (formerly DM) intensive designs.
3. We are readjusting the lightness values of the light (ex-GR) color palettes to appear less muted.
4. We are adding new color shades for the dark (ex-DM) color palettes to match that of light ones!

In the future, we will introduce new color shade usage guidelines, such as when to use specific lightness shade for specific applications (terminal/command-line colors, user interface, etc.). Stay tuned for updates on these ones.
