WOW! That’s quite a long title (>_):]

But do you know what’s even longer? The fact that we have another major site update for the first time in [1.5 months](#)!

- [Share to KakaoStory, KakaoTalk, and X.](#)
- [Rich-content oEmbed.](#)
- [Embedding instructions on our share buttons.](#)
- [The Shift’s Digital Garden.](#)
- [Check your web browser’s compatibility!](#)
- [What are we planning next?](#)

Share to KakaoStory, KakaoTalk, and X.

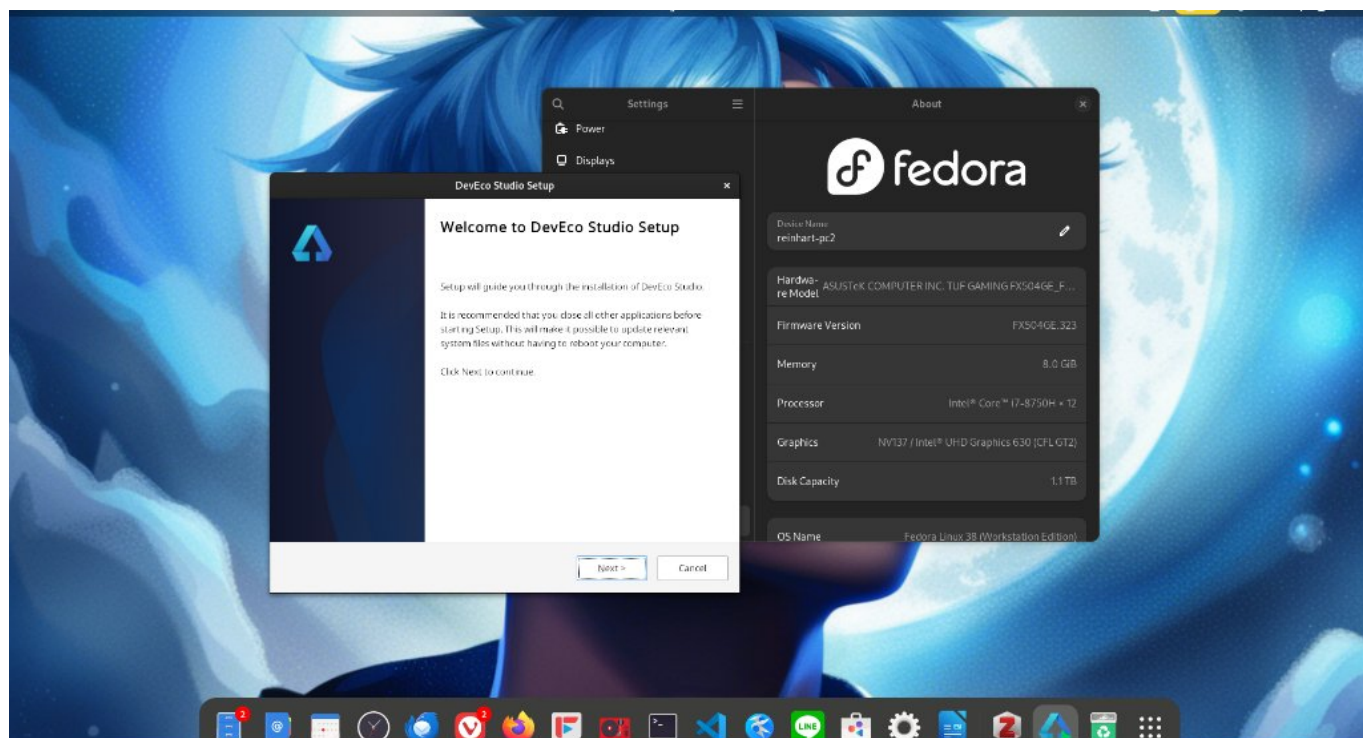

The very first thing you’ll notice since last time is that, we finally included **Share to KakaoTalk** and **KakaoStory** into our website. Since the sharing process requires us to send your information to Kakao (including your current operating system), a friendly (>_) will warn you first when clicking on these share buttons.

Additionally, we added another share button for X while not hiding the ones for Twitter. The new

share button still redirects to twitter.com because [X.com is still blocked in Indonesia](#).

Rich-content oEmbed.

And the next one is probably one of the *best* easter eggs out there. **Our oEmbed plugin finally uses rich-text content by default**, which is more preferred than basic ones in most apps. If you are using WordPress (with the Gutenberg or block-based editor) to write your posts right now, you will be able to see by copy-and-pasting our links into your blog post.

Let's test DevEco Studio on WINE (Linux)!

REINHART1010

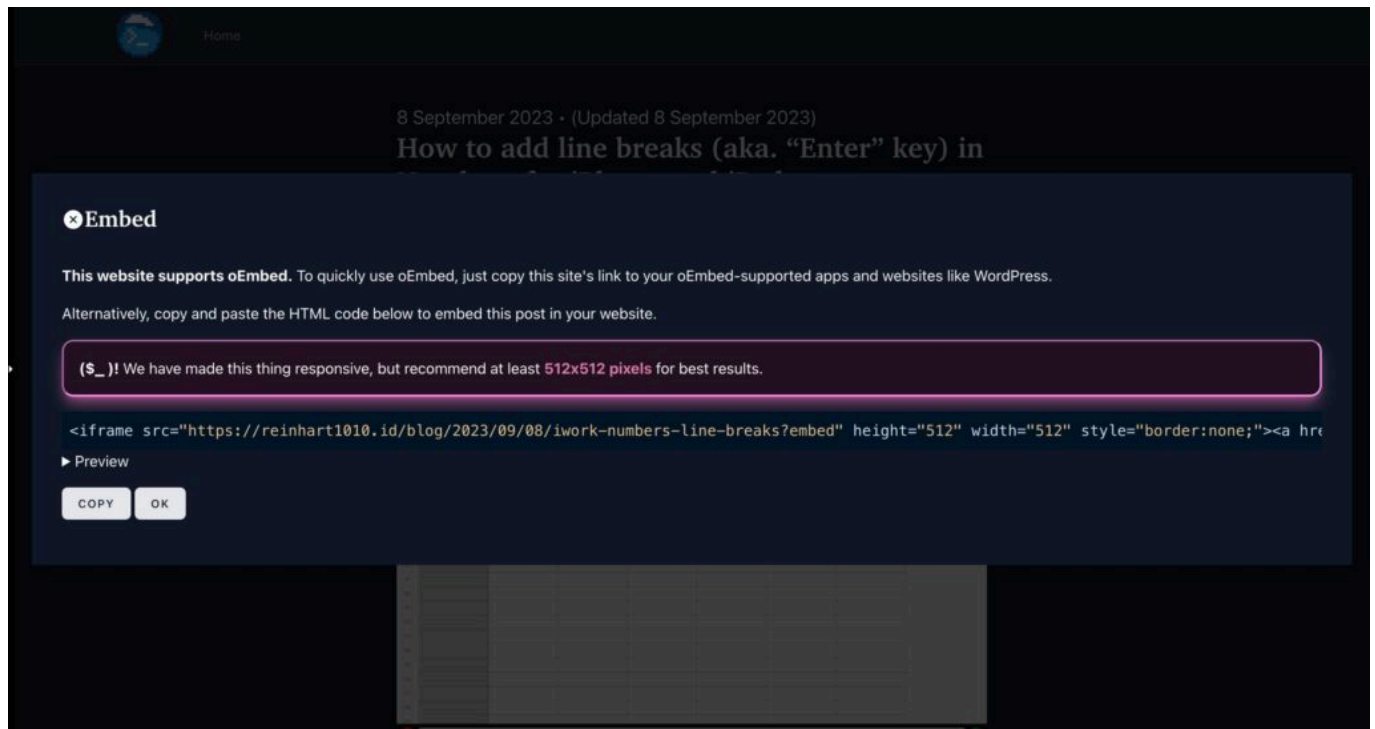

[Folkative](#), anyone?

But, don't expect this to appear on LinkedIn, Notion, and other common apps yet; they commonly have a whitelist of supported websites.

And one day we might build an automated tool to share blog posts from here to Instagram. With some [Selenium](#) magic, of course.

🔗 Embedding instructions on our share buttons.

Oh, yes, today we also let you know how to embed our blog posts when oEmbed is still not supported. Just tap on the **Embed** (the classic `</>` symbol) button to get started.

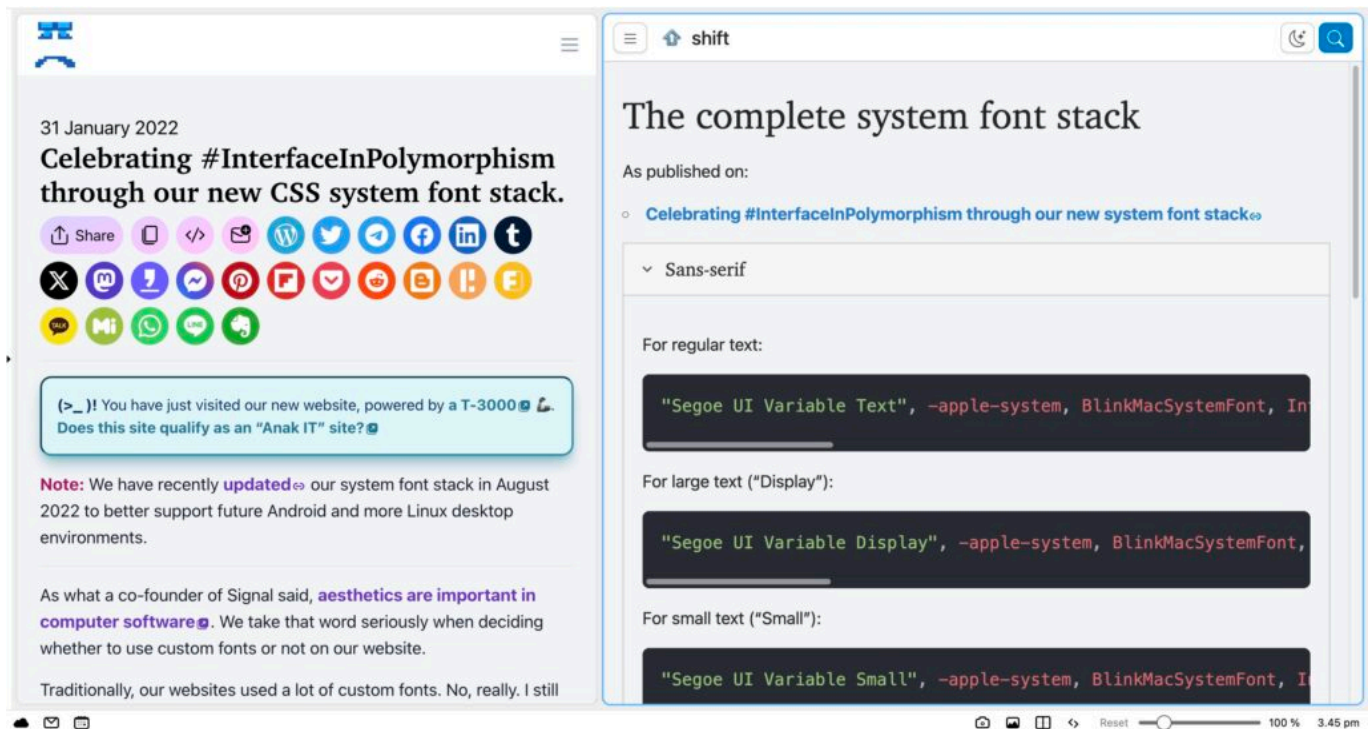

🌱 The Shift's Digital Garden.

A **digital garden** is an unique place, or a unique kind of a website with content that grow like plants. It may be comparable to wiki sites, but unlike wikis, it is neither meant to be perfect especially in the case of writing, nor have for the content to be fixed like a blog post.

There are some good explanation about it in [English](#) and [Indonesian](#).

Now, [The Shift's Digital Garden](#) is a collection of our ideas and posts that are worth to share, but we feel it needs more time to develop before we can finally harvest into blog posts like on reinhardt1010.id.

One of them is a [sequel](#) to our great [system font stack](#), where we dropped some fonts and added new serif and monospace system font stacks. The ones on the digital garden will become the de-facto, updated version of whatever we have put here on reinhardt1010.id.

Note that in digital gardens, time (of posting/publishing) does not matter. After all, unlike the blog post of the left, the contents of a digital garden doesn't have to be structured.

☐☐ Check your web browser's compatibility!

It is our responsibility to let you know when you are using an unsupported web browser. And the best part, **we won't complain you for not using Google Chrome**. To prove that your web browser is no longer recommended, we decided to add a [simple test webpage](#) to let you know.

It's very interesting to the fact that we have found an interesting Firefox bug that isn't reproducible in other web browsers. Even when you try to force the emoji to be rendered in an **outline font** using CSS' `font-family` (like Segoe UI Symbols, Symbola, or Noto Emoji), Firefox still renders them with the default color emoji. [More on Bugzilla report #1845450](#).

You can check for yourself how well your web browser and operating system renders these modern emojis. **There should be EXACTLY five emojis**, nothing more or less, without any rectangular boxes visible, for each emoji versions and variants to completely pass this test.

Colored		Outlined

□ What are we planning next?

As it is nearer to **October 10th**, aka. Reinhart's 22th birthday, when we will launch a grand opening of our website, there are many things that we are planning to add into our website.

First, is by adding a powerful search engine into this site, supporting fuzzy search and even searching across our websites (like our new digital garden and Caps' own blog post over Tumblr).

Next, is by adding a dedicated set of projects that we have been working on, so reinhart1010.id will become a portfolio site, too!

Next, we are currently exploring ways to share content, starting with **Snapchat**, and hopefully **WeChat**, too. We may also create a print-friendly version of our articles, so we can put a **Print** button on that gorgeous-looking share buttons.

The current site design looks too big when printed. Also, scrapping the share buttons will definitely saves more space.

There might be another side-quest on porting [HAM](#) to [Halfmoon](#) 2.0, which was [released](#) since about a month ago. Even before HAM, Halfmoon has become an important part of our websites, including the now-archived **reinhart1010.github.io** website.
